

The Next generation of Enzymes

NextZyme

Low levels of enzymes can lead to poor digestion, occasional acid indigestion or heartburn, deficiencies in essential vitamins and minerals, and low vitality. But all digestive enzymes are not the same. Most enzyme products work only in the stomach, even though almost all carbohydrate and fat digestion happens in the small intestine.

NextZyme™ Dual Digestive Enzymes are pH- stable and help break down food in both the stomach and the small intestine for dual-action digestion and absorption of proteins, fats, and carbohydrates.* In addition, this unique formula replaces animal pancreatin with safe, all-vegetarian enzymes.

Take NextZyme™ Dual Digestive Enzymes to support digestive health and nutritional absorption every day.*

NextZyme – Dual Digestive Enzymes

- May help alleviate occasional gas, bloating and indigestion*
- Reduce feeling of fullness due to undigested food*
- Maximize nutritional absorption from food*
- Support pancreatic enzyme function*
- Complete the digestion of “hard-to-digest” foods such as whole grains, beans, proteins and fats*
- Support energy and vitality*
- Work in stomach and small intestine for dual-action digestion*
- Replace animal pancreatin with safe vegetarian enzymes

***Suggested use:** Take one capsule with meals

Product does not contain milk, egg, crustacean shellfish, tree nuts, wheat (gluten) peanuts or soybeans.
