

PROBIO 5

What is ProBio 5 Dietary Supplement?

It's a New "Three In One" Formula for Maximum Candida Defense!

ProBio 5 has five extra strength probiotics, added enzymes, intestinal flora, B6 and Grapefruit seed extract - all in one effective delivery system.

ProBio 5 contains powerful enzymes that are essential to the body in its need for support in synthesizing (breaking down) hostile organisms that may have a negative impact on your well being.

ProBio 5 will support and provide the following benefits to your body:

- **Intestinal cleansing**
- **Proper probiotic balance in the intestinal tract**
- **Proper intestinal balance which increases nutrient absorption**
- **Yeast organism (candida) and fungal cleanse**
- **A cleanse without detox side effects**

ProBio 5 will typically provide the following results: A relief from typical **Candida** symptoms, which may include anxiety, recurring irritability, heartburn, indigestion, lethargy, extreme food and environmental allergies, acne, dry, flaky, itchy skin, jock itch, migraine headaches, recurring cystitis/vaginal infections, premenstrual tension, and menstrual problems. A very large percentage of the population, all ages, sex and race have a yeast overgrowth and don't even know it!

Why put enzymes in ProBio 5? Yeast and fungal organisms are comprised of proteins, chitin, and cellulose structures. Proteins are broken down by protease enzymes, and cellulose is broken down by cellulase. The chitin structure can only be processed in the presence of the chitinase (chitosinase) enzyme. The enzyme profile in ProBio 5 which is micro encapsulated, is designed to process away the protein based outer layer of yeast and fungal organisms. This then exposes the interior of these organisms to the cellulase and chitosinase in the ProBio 5. Enzymes are efficient and effective in the destruction of yeast and fungi.

ProBio 5 Friendly Flora In addition to enzymes, ProBio 5 contains very beneficial "friendly bacteria" that assists in supporting the body's need for a balance of probiotics (micro flora) in the digestive tract. This "friendly bacteria" is delivered in a micro-encapsulation system to ensure that they reach their intended destination, in the digestive tract to help rebuild the damage done by the yeast and fungi overgrowth.

Vitamin B6 The probiotics and enzymes in ProBio 5 are assisted by the addition of vitamin B6. B6 is required by enzymes involved in protein metabolism and is also essential for red blood cell metabolism. In addition, vitamin B6 helps increase the amount of oxygen carried by the blood. A well oxygenated body is resistant to yeasts and fungi.

Grapefruit Seed Extract Grapefruit seed extract has been added to ProBio 5 since it has a therapeutic effect internally against yeasts and fungi by actually destroying the organisms. At the same time, grapefruit seed extract stimulates the immune system and works like an antibiotic drug without destroying the helpful bacteria that are normally present. The components of grapefruit seed extract contain bioflavonoids and vitamin E. These work as antioxidants and makes grapefruit seed extract one of the most powerful natural antioxidants available.

ProBio Probiotics Without sufficient probiotics, your body's nutrient absorption is impaired; this can result in producing an environment that is supportive of yeasts and fungi growth. ProBio 5 contains five powerful probiotics: Lactobacillus Sporogenes, L. Acidophilus, L. Planterum, B. Longum and S. Boulardi.

Lactobacillus- Lactobacilli are bacteria that normally live in the human small intestine and vagina. Lactobacillus acidophilus is generally considered to be beneficial because it produces vitamin K, lactase, and anti-microbial substances such as acidolin, acidophilin, lactocidin, and bacteriocin.

L. Acidophilus- This is a powder form of the normal, friendly bacteria that live in our intestines (called flora). Taking acidophilus replenishes our bacterial flora and reduces overgrowth of yeast. especially of some bacteria which grows well in an acid medium.

L. Planterum- Derived from sour dough (used to ferment sauerkraut and salami) has been demonstrated to improve the recovery of patients with enteric bacterial infections. This bacterium adheres to reinforce the barrier function of the intestinal mucosa, thus preventing the attachment of the pathogenic bacteria to the intestinal wall.

B. Longum- One of the most important residents in the human gastrointestinal tract, B. Longum keeps the digestive system running smoothly blocks the growth of harmful bacteria and boosts the immune system. The organism ferments sugars into lactic acid and has many health benefits for humans and is often the dominant bacterium found in humans. It is a Gram-positive, anaerobic, branched rod-shaped bacterium.

Researchers have identified a number of proteins that are specialized to help B. Longum interact with the human host and persist against harmful bacteria and future research will now look closely at which genes allow B. Longum to live in different environments such as dairy products, vegetables and the human gastrointestinal tract.

S. Boulardi- The intestinal micro flora are important for maturation of the immune system, the development of normal intestinal morphology, and in order to maintain a chronic and immunologically balanced inflammatory response. The micro flora reinforces the barrier function of the intestinal mucosa, helping in the prevention of the attachment of pathogenic microorganisms and the entry of allergens. Some members of the micro flora may contribute to the body's requirements for certain vitamins, including biotin, pantothenic acid and vitamin B12.

Some recent comments from our BeeWell customers about ProBio 5:

“The new probiotics are much improved.” (Former ThreeLac Customer)

“Congratulations for finding a pearl!”

“This particular brand of probiotics looks and feels very good. I like it, send me six.”

Supplement Facts		
Serving Size: 2 Capsules		
Servings Per Container: 30		
	Amount Per Serving	% D. V.
Proprietary Blend	200 mg	*
Profloras		
PapDzyme		
Cellulase		
Chitinase (from bacillus sp.)		
Probiotic Blend	100 mg	*
Lactobacillus Sporogenes		
L. Acidophilus		
L. Planterum		
B. Longum		
S. Boulardi		
Antioxidant Blend		
Vitamin C	150 mg	250%
Grape Seed Extract	25 mg	*
Vitamin B6	25 mg	50%
* Daily Value Not Established		
Other Ingredients: Vegetable Puffulan.		
Contains No: Yeast, Corn, Milk, Sugar, Starch.		
Made in U.S.A.		
Distributed by: Nutrition Specialties™ Tulsa, OK.		

ProBio 5 (60 Vegetable capsules) \$49.95 +S&H

Suggested Dosage:

Take two capsules with evening meal or at bedtime. When desired results are achieved, take one capsule with evening meal or at bedtime for maintenance.

One bottle - approximately six to eight weeks supply.
